Art Unit: 2666

1. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See In re Goodman, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); In re Longi, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); In re Van Ornum, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); In re Vogel, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, In re Thorington, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Application/Control Number: 09/965,745

Art Unit: 2666

Claims 1-38 provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-13 of copending Application No. 10/464,291 in view of Cassing (C6x Solutions for Voice Over IP Gateway).

For claims 1-38, the claims 1-13 of copending Application No. 10/464,291 disclose a communication method for use by a first gateway device to communicate

with a second gateway device over a packet network, the first gateway device capable of communicating with a communication device over a telephone line, the communication device capable of transmitting V.8bis initiating signals having a first tone segment and a second tone segment, the method comprising the steps of:

receiving a call request from the second gateway device for the communication device,

placing a call to the communication device over the telephone Line;

enabling a tone detector for detecting the first
tone segment;

Art Unit: 2666

detecting the first tone segment transmitted from

the communication device over the telephone line; and

preventing, in response to the detecting step, at

least one tone in the first tone segment and the

second tone segment from reaching the second

gateway device;

wherein the communication device is a modem device;
wherein the preventing step enables a filter to prevent
at least one tone in the first tone segment and the
second tone segment from reaching the second
gateway device;

wherein the first tone segment includes dual tones,
and wherein the enabling step enables a single
tone detector to detect one of the dual tones;
wherein the first tone segment includes dual tones,
and wherein the enabling step enables two tone
detectors to detect both of the dual tones;
wherein the step of enabling the tone detector enables
the tone detect for a pre-determined period of time;
wherein the first tone segment includes a dual tone,
and wherein the filter includes a notch filter
centered around one of the dual tones;
wherein the filter includes a plurality of notch filters,

and wherein each notch filter is centered around a different single tone in the second tone segment; wherein the step of enabling the tone detector enables the tone detector to detect at least one tone in the first tone segment of a initiating signal; further comprising a step of informing the second gateway device of the communication device, in response to the detecting step; further comprising a step of configuring the first modem for MoIP operation; wherein the step of configuring modem for the MoIP operation configures the first gateway device for modem pass through operation; and wherein the step of configuring modem for the MoIP operation configures the first gateway device for modem relay operation.

Note: See claims 1-13 of the copending application number 10/464,291.

For claims 1-38, Applicant's claims 1-38 merely broaden the scope of claims 1-13 of the copending application number 10/464,291 by eliminating the terms "V.bis initiating signals" from the claim 1 of the claims 1-13 of the copending application number 10/464,291. It has been held that the

Art Unit: 2666

omission of an element and its function is an obvious expedient if the remaining elements perform the same function as before. In re karlson, 136 USPQ 184 (CCPA). Also note Ex Parte Raine, 168 USPQ 375 (bd. App. 1969); omission of a reference element whose function is not need would be obvious to one skilled in the art.

For claims 3,12,27,31,7,15,28,34,37, the claims 1-13 of the copending application number 10/464,291 disclose all the subject matter of the claimed invention with the exception the communication device being a facsimile device and the notch fileter centered around 2100 Hz in a communication network.

Cassing from the same or similar fields of endeavor teaches a provision of the Fax modem (see figure 5) and the 2100 HZ (see table 7). Thus, it would have been obvious to the person of ordinary skill in the art at the time of the invention to use the communication device being a facsimile device and the notch fileter centered around 2100 Hz as taught by Cassing in the communications network of the claims 1-13 of the copending application.

The communication device being a facsimile device and the notch fileter centered around 2100 Hz can be implemented/modified into the network of the claims 1-13 of copending application number since the claims 1-13 of the

Application/Control Number: 09/965,745 Page 7

Art Unit: 2666

copending application number 10/464,29 does teach voice over IP.

The motivation for using the communication device being the facsimile device and the notch fileter centered around 2100 Hz into the communications network of the claims 1-13 of copending application number being that it provides much higher utilizations while maintaining the guaranteed QoS.

This is a <u>provisional</u> obviousness-type double patenting rejection.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 20,26, and 27 are rejected under 35 U.S.C. 102(b) as being anticipated by Cassing (C6x Solutions for Voice Over IP Gateway) .

Note: the term " capable" is not positively recited claimed limitation. Therefor the limitations after the term are not considered the claimed limitation. It is suggested applicant to remove the work " capable" from the claim.

Application/Control Number: 09/965,745 Page 8

Art Unit: 2666

For claims 20,26, and 27, Cassing disclose an input (see PCM in figure 5); a filter circuit (see filter in figure 9), an output to provide the second signal for transmission to the second gateway (see PCM Out in figure 5); the communication device being a modem or facsimile device (see FAX modem in figure 5).

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Vargo et al. (6,477,164) and Johnston (6,480,585) are all cited to show systems which are considered pertinent to the claimed invention.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to DANG T TON whose telephone number is 571-272-3171. The examiner can normally be reached on MON-WED, 5:30 AM-6:00 PM and Thur 5:30-9:30 A.M.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, RAO SEEMA can be reached on 571-272-3174. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
